November 24, 2025

Dear Sir or Madam,

Please consider the attached submission for publication in *Fire*. I am excited to leverage the combination of unique datasets to address persistent questions about wildland fire management and monitoring: How do remotely-sensed burn severity metrics relate to terrestrial measurements of fire behavior? And how transferable might research from prescribed burns be to areas burned by wildfire? This analysis provides encouraging results that will be of interest to wildland fire managers in rangelands worldwide—ecosystems frequently neglected by the forest-heavy fire ecology community.

This paper is not under consideration for publication elsewhere. As the sole author, I confirm my approval for submission.

Please note that this submission follows e-mail correspondence with Shirley Yang and Riva Song from 20 June 2025 regarding a full APC waiver for this manuscript.

I look forward to working with the editors and reviewers of *Fire* to ensure the manuscript meets the standards of the journal.

Sincerely,

A handwritten signature in blue ink, appearing to read "Devan Allen McGranahan".
